Research Experience

Sep 2021 – present **Human-AI Lab, University of Michigan**
Remote research intern, advised by Anhong Guo.

- Developed a web authoring interface to support video describers to understand and describe 360° videos, and a mobile prototype enabling blind people to consume the generated descriptions. [C.7]

Jun 2020 – Jul 2022 **Interactive Graphics Lab, National Taiwan University**
Research Assistant, advised by Robin Bing-Yu Chen and Tom Yeh.

- Leading weekly two-hours group discussion on different HCI topics; Mentoring master students on brainstorming and shaping their research projects aimed for top HCI venues.
- Designed and conducted a study to identify accessibility challenges of laser-cut assembly; Implemented Fusion 360 plug-in to generate tactile aids for input laser-cutting models; Evaluated tactile aids, and leading video and qualitative analysis [C.6].
- Designed and conducted a user study with blind and sighted groups to understand (non-)visual strategies of laser-cut assembly; Conducted inter-coding video analysis.

Feb 2019 – Aug 2019 ***Research Assistant, advised by Robin Bing-Yu Chen and Da-Yuan Huang.***
Implemented six tablet applications for Glissade[C.2] using Unity, and provided Masque [C.1] designers with authoring tools to specify haptic feedback on the tablet.

- Integrated arduino software and electronics; Implemented two VR applications; Designed and conducted user research to obtain initial feedback on using TanGo [C.4].

Sep 2019 – Sep 2020 **XDiscovery Lab, Dartmouth College**
Graduate student, advised by Xing-Dong Yang.

- Designed and fabricated haptically-assisted conductive 3D-printed adaptations (via Fusion 360) for existing circuit components that can interact with smartphones via a conductive breadboard extension enclosures; Designed and conducted a study to identify accessibility challenges for circuit prototyping, and another study to evaluate designed adaptations [C.5].
- Collected and labeled 500+ images of breadboard circuits as training data for Mask-RCNN. Computer vision algorithms were implemented to segment the holes and electronics pins on the breadboard, and to provide on-screen AR assistance to students via Android smartphones.

Sep 2018 – Apr 2019 **Mobile and Ubiquitous Interaction Lab, National Yang Ming Chiao Tung University**
Research Assistant, advised by Yung-Ju (Stanley) Chang.

- Designed and executed an experiment using methods: WoZ, speed dating, user enactment and contextual inquiry, to understand human-AI communication in smart home [C.3].
