Research Experience

Sep 2021 – present **Human-AI Lab, University of Michigan**
Remote research intern, advised by Anhong Guo.
- Developing an AI system to transform visual properties of existing 360 videos into immersive and interactive haptic-audio alternatives for blind or low-vision people. We target at UIST'22.

Jun 2021 – Nov 2021 **AI Security Lab, National Taiwan University**
Project Collaborator, advised by Shang-Tse Chen.
- Developing a website (including front and back end) to collect data of using our proposed audio CAPTCHAs from 120 online general users; Conducting an online usability test of our proposed CAPTCHAs with 12 blind users. In submission to IEEE Security & Privacy'22.

Jun 2020 – present **Interactive Graphics Lab, National Taiwan University**
Visiting student, advised by Bing-Yu (Robin) Chen and Tom Yeh.
- Leading weekly two-hours group discussion (15 master students) on different HCI topics; Mentoring master students on brainstorming and scoping research projects.
- Designing and conducting a study to identify accessibility challenges of laser-cut assembly; Implementing a Fusion 360 plug-in to generate tactile aids for input laser-cut model; Conducting an evaluation for tactile aids, and leading video and qualitative analysis [C.6].
- Designing and conducting a user study with blind and sighted groups to understand (non-)visual strategies of laser-cut assembly; Conducting inter-coder video analysis; In submission to CHI'22
- Collecting brain signal data using fNIRs on VR tasks, and analyzing data by MATLAB.

Feb 2019 – Aug 2019 ***Research Assistant, advised by Bing-Yu (Robin) Chen.***
Using Unity to implement six tablet applications for Glissade[C.2], and an authoring tool for designer to specify haptic feedback on a tablet for Masque [C.1].
- Integrating arduino software and electronics; Implementing two VR applications; Designing and conducting an user study to get preliminary feedback of using TanGo [C.4].

Sep 2019 – Sep 2020 **XDiscovery Lab, Dartmouth College**
Graduate student, advised by Xing-Dong Yang.
- Designing and fabricating conductive 3D-printed adaptions full of tactile aids for existing circuit components (via Fusion 360), which can interact with smartphone through a conductive breadboard extension casing; Designing and conducting a study to identify accessibility challenges of circuit prototyping, and an another study to evaluate designed adaptations [C.5].
- Collecting and labeling 500+ images of breadboard circuits as training data of Mask-RCNN. Implementing computer vision algorithms to segment breadboard holes and electronics pins, and visualize on-screen AR helps for students through an Android smartphone. (Manuscript Unpublished)
